

Minutes meeting completion user stories on Housing Module 13 jan. 25

Present: 5.1.2.e 5.1.2.e

Discussed/ appointments

- Git content on the user stories is not overview friendly, therefore those are copied and further elaborated in a word document: [User story - housing module v2.docx](#)
- 5.1.2.e will import the additional issues in Git
- 5.1.2.e will include the issue numbers in the overview figure of the Housing Module
- 5.1.2.e will sort out to make a separation in the Issue board between *User stories* and *Actual issues*
- It seems that Git issues cannot easily be transferred to a word document. Therefore it is decided that we will maintain a running Word document containing all relevant issues
- This should coincide with the model documentation. It is decided that we finalize each sprint with a documentation phase and do not proceed with the next sprint before the documentation of this sprint is finished.
5.1.2.e will ask a colleague for an example on how to document.
- User stories should be rather brief; details should be included as comments. Therefore we did not explicitly mention other emissions such as CH₄, PM etc.
- 5.1.2.e will generate an outline for the Inception report/workplan for the planned project meeting on 16 jan. 2025 and TAG meeting on 25 jan. 2025
- 5.1.2.e and 5.1.2.e will further elaborate on the Issue board and prepare a presentation on this for the meeting on 16 jan. 2025
- Manure processing will be included in a second stage, but the code should be prepared for that.
- 5.1.2.e will make an overview of the current ideas of including manure processing.
